Mr. Donald Trump Office of President-Elect 1800 F Street, NW Washington, DC 20006

Dear President-elect Trump:

On behalf of the U.S. scientific, engineering, and higher education community we are looking forward to working with you, as 45th President of the United States, and your administration.

As President you will face a wide range of domestic and international challenges, from protecting national and energy security, to ensuring U.S. economic competitiveness, curing diseases, and responding to natural disasters. These challenges share one thing in common: the need for scientific knowledge and technological expertise to address them successfully.

For this reason, we urge that you quickly appoint a science advisor with the title of Assistant to the President for Science and Technology who is a nationally respected leader with the appropriate engineering, scientific, management and policy skills necessary for this critically important role. This senior level advisor can assist you in determining effective ways to use science and technology to address major national challenges. Moreover, this individual can coordinate relevant science and technology policy and personnel decisions within the executive branch of government.

The economic benefits of advancements in science, technology and innovation have been well documented, estimated by leading economists to have accounted for approximately half of U.S. economic growth over the last fifty years. Past government investments in the U.S. scientific and technological enterprise have fueled our economy, created new jobs, and ensured our global competitiveness and national security. At the same time, these investments have enabled the development of a system of U.S. research universities and national laboratories unmatched in the world.

We know that one of your top priorities will be to focus on ensuring that the U.S. economy remains strong and continues to grow. If we are to maintain America's global leadership, and respond to the economic and security challenges currently facing the nation, we must build on our strong history of federal support for innovation, entrepreneurship and science and technology.

Toward that end we would appreciate the opportunity to meet with you or leaders of your transition team to discuss how the science and engineering community can assist with developing a path forward to ensure that the U.S. innovation infrastructure grows and flourishes under your administration and to suggest candidates for top science and technology posts.

Thank you for your consideration and we look forward to your response. You may contact Joanne Carney (<u>jcarney@aaas.org</u>) with the American Association for the Advancement of Science (AAAS) to coordinate a convenient meeting time, and we will follow up with a proposed list of attendees.
